

High Performance for Weather and Climate

Getting Started Guide

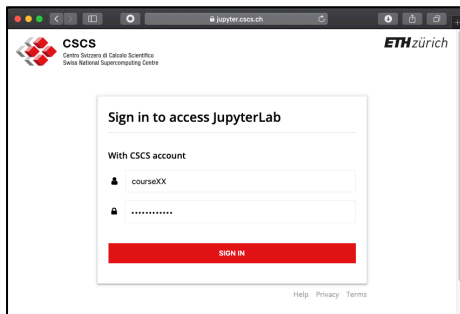

1. Send private message asking for your username and password to...

Family name starting with A-K → Stefano Ubbiali

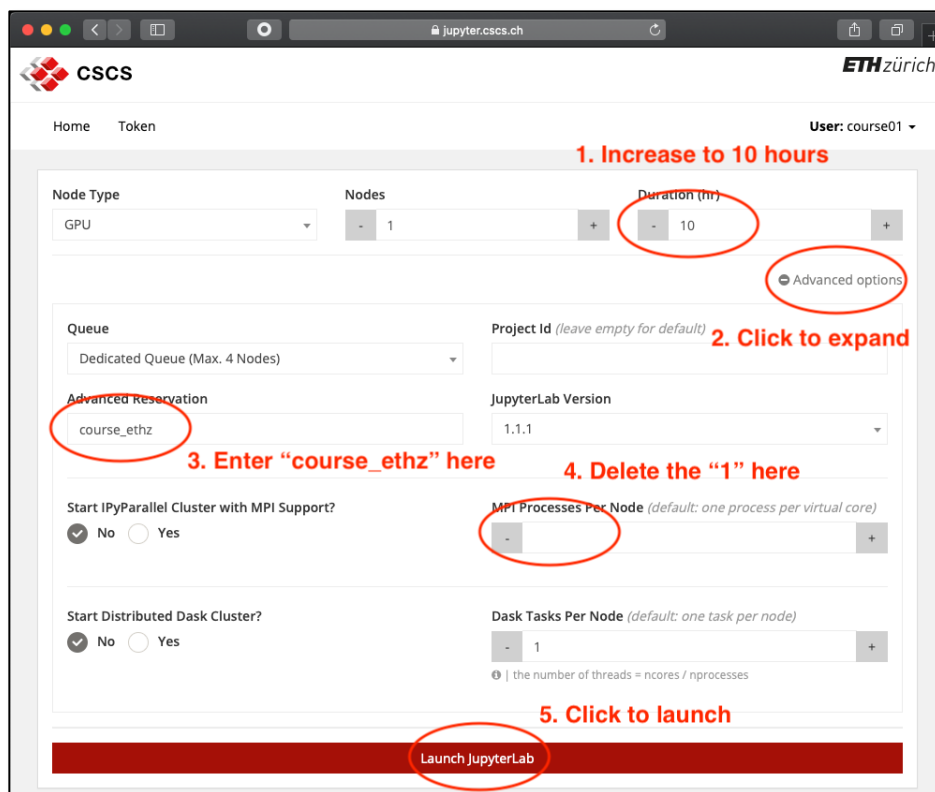

Family name starting with L-N → Tobias Wicky

Family name starting with O-Z → Oliver Fuhrer

2. Open a browser
3. Go to <https://jupyter.cscs.ch/>
4. Login with your username and password

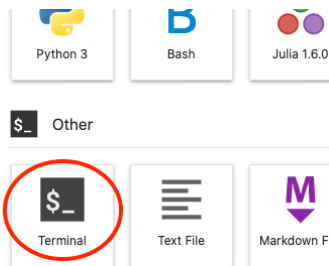

5. Configure settings (see below) and click on “Launch JupyterLab”

NOTE: The instructions continue on next page!

6. Wait until JupyterHub has started up.

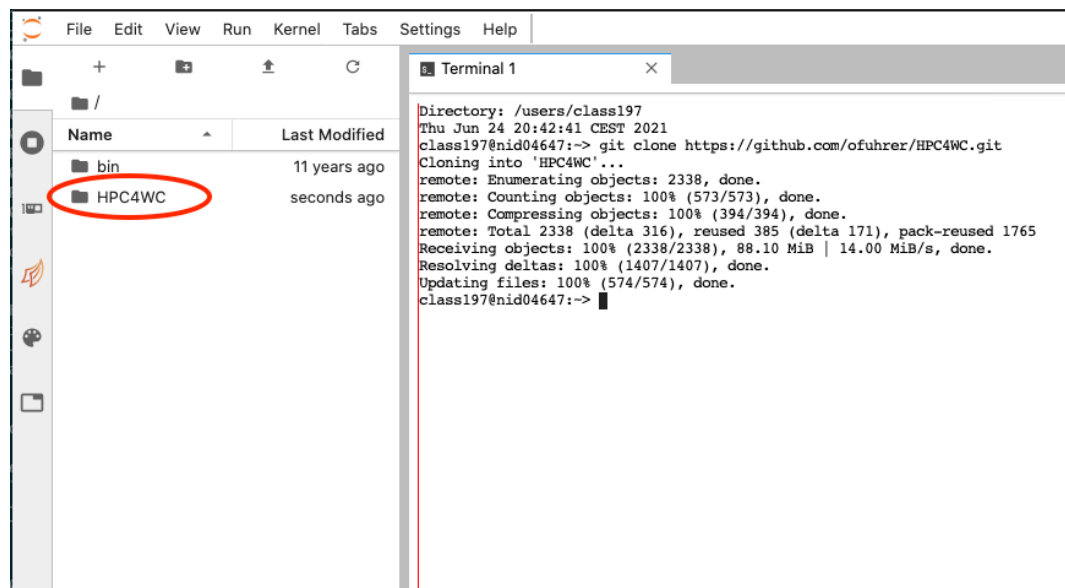

7. In the Launcher window on the right, click on Other → “Terminal”. A terminal prompt should appear.

8. Type the following commands.

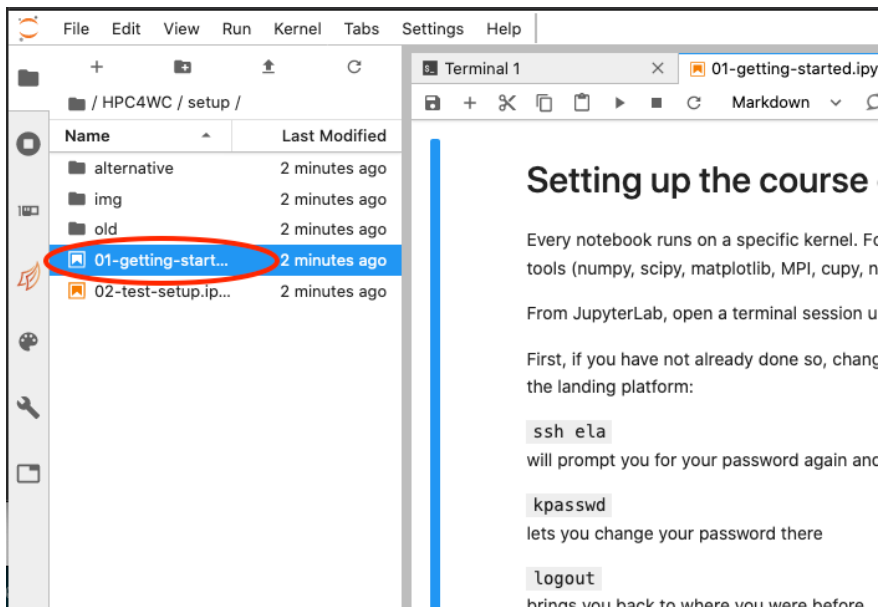

```
git clone https://github.com/ofuhrer/HPC4WC.git
```

9. Make sure you can view the left sidebar. In the left sidebar double click on “HPC4WC” and then on “setup”

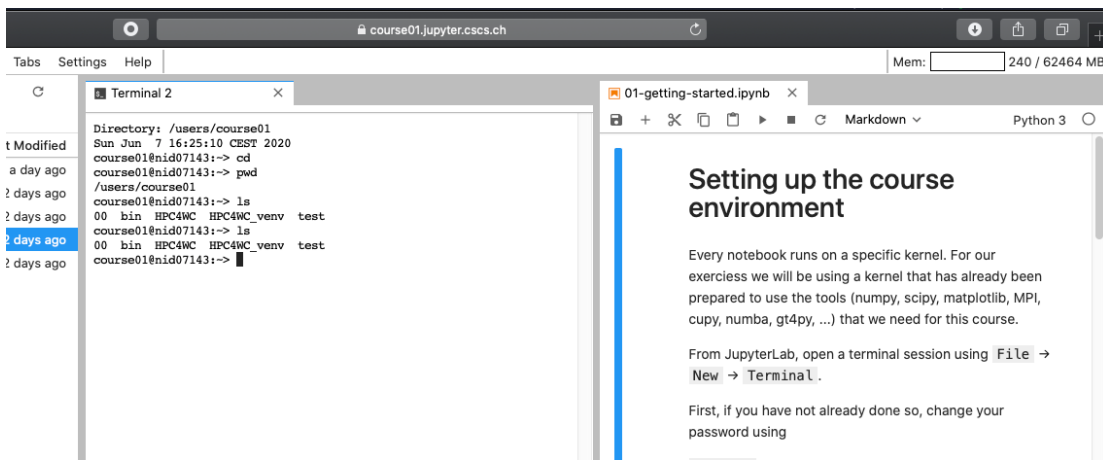

NOTE: The instructions continue on next page!

10. In the left sidebar, open the 01-getting-started.ipynb Jupyter notebook and follow the instructions in the notebook.

NOTE: It is possible to open up the Jupyter notebook side by side with a Terminal in order to more easily.

11. Follow the instructions in the Notebook
